# Ильяс Толыкбаев

Frontend developer | Reactjs, Nextjs, Typescript, Redux, RTK, Nodejs, Fsd

Алматы, Алматы, Казахстан

## Общие сведения

### О себе

Разработчик с 2+ годами опыта в React, TypeScript, Next.js и создании высоконагруженных веб-приложений. Имею опыт работы с Mini App Telegram, GraphQL, WebSocket, RTK Query и API-интеграцией.

### Ключевые проекты

CRM-система для ICEBERG-Service – Разработка и поддержка (React, TS, RTK Query, GraphQL, MUI)

Мини-приложения, включая Mini App Telegram (03.2025 – 04.2025, 8 дней) – Разработка и интеграция (Vue.js, Flutter, Mini Apps)

Разработка интернет-магазина одежды SIVENO (02.2025, Frontend) – Реализация витрины и корзины (Next.js, TypeScript, Tailwind)

Разработка сайта для спортзала Rave (11.2024 – 01.2025, Frontend) – Создание UI (React, TypeScript, Tailwind)

Сайт по продаже автомобилей Carvestor (2025, Frontend) – Разработка интерфейса и каталога авто (React, TypeScript, Redux Toolkit)

Безопасность и WebSocket для Itransition – Реализация backend-архитектуры (Node.js, SHA-256)

### Стек технологий

# Frontend: React, Next.js, Vue.js, Mini Apps, Mini App Telegram, Redux, TypeScript, RTK Query  
# Backend: Node.js, Express.js, Nest.js, WebSocket  
# Базы данных: PostgreSQL  
# Инструменты: Git, Figma, Docker, Swagger

## Языки

Казахский – родной | Русский – C1 |  
Английский – B2

## Опыт работы

### Фриланс

Frontend developer

сентября 2024 - Present (1 год)

He has developed and participated in the creation of more than 7 commercial projects, performing both frontend and partially fullstack tasks. He worked both in teams and independently. All projects were carried out according to the terms of reference and design, taking into account deadlines, tasks and code review.

#### Key projects:

♂# An application for the Inrave Studio gym chain

Development of complex interface elements, layout layout, integration with the backend. Work in a team of 6 people: 2 frontend, 1 backend, designer, QA and project manager. All tasks were handled through Jira.

, A platform for the auction sale of cars from the USA to the CIS

Complex trading logic, real-time betting, and lot generation. Teamwork: 2 frontends + 1 fullstack. Implementation of realtime updates, animations, and interactions via WebSocket.

, Online clothing store Siveno Store

Connection of payment systems, bonus system development, API integration.

Implemented a scalable architecture and UI with custom hooks.

Telegram applications for eSIM sales and gifts

Authorization via Telegram, interaction with the Telegram API, and custom UI animations. Implementation of the backend on Express and integration with databases.

, A web application for a veterinary clinic

A full-fledged website with dynamic content and animations. Working with the backend API, admin panel, adaptive layout.

, Tax application for Kyrgyzstan — izi.expert

Refinement of a large product together with a distributed team.

Later, he participated in the creation of an AI assistant for tax consultations.

MVP is the SmartPLN

CRM/ERP platform, a solution for sales forecasting and order generation.

Integration of analytics, multi-level filtering and scalable modules.

Progress:

Improved UI stability by implementing the FSD architecture and optimized components

Reduced page loading time by 30% thanks to PWA and lazy loading

Increased customer satisfaction (according to NPS) by 15% due to intuitive UI and responsive support

Frontend Web Developer

мая 2024 - ноября 2024 (7 месяцев)

Алматы, Казахстан

Writing and supporting a comprehensive business management system (crm).

The main tasks included developing components and fixing components.

Participated in the development of a system combining CRM functions, business process automation and analytical tools. Corrected and changed schemes for sending api requests, also modified multifunctional components, prescribed i18n localization, identified problems in the code and corrected them. He also described the problems that arose during the development process. Worked using mui. Created custom hooks, modules, modal windows and integrated them into the project. Worked closely with the backend for better and smoother operation of the project. My responsibilities also included typing all interfaces in the application and correcting any errors that arose. Introducing new algorithms in the application to optimize performance.

Technology stack:

React, TypeScript, JavaScript, RTK query, Redux, Sass, MUI, GraphQL, React Hook Form, yup resolver, fsd, apollo, i18n

Ittransition Group

Стажёр-разработчик

апреля 2024 - мая 2024 (2 месяца)

Удаленно

Solved specialized problems to raise qualifications and improve skills.

During my work, I solved problems such as hashing data in SHA-256 in the javascript programming language; the main task was to get a file with data from the console and hash it in such a way as to issue an individual identifier for the entire file. In addition, a rock-paper-scissors game was developed using HMAC hashing as the unique game code.

In addition, in the process of undergoing advanced training, there were tasks such as writing a web application, both from the front part and from the back part. An application was created for user management, the essence of which is the ability of authorized users to block, kick out of the session and delete other users. I also developed applications for generating fake user data. In this task, selectors with weights were implemented; when they were changed, another list of data generated by the changed select was produced and a unique seed of the entire result of the work was provided.

Technology stack used:

React, TypeScript, JavaScript, RTK query, Redux, NodeJs, ExpressJs, WebSocket, SHA-256, FSD
